Intro

Sunday, April 28, 2024   5:04 PM

Hi there Good Evening and really excited to start this journey here and can't wait to see how this notebook future is going to be

So I'm going to start this by writing some back ground about my python knowledge here:

So I'm really not very new to python I do have some familiarity with the code and also about its installation in different operating Systems.

<u>Why do I want to learn Python?</u>

I like the way the language is designed where you can express your thoughts instead of concentrating more on Syntax. It has come a long way and it is so easy to setup and start using.

Moreover the usage of Python has grown drastically in various fields especially in the field of AI and it has dominant share in Data Engineering field. Also there are considerable amount of projects using Python as backend language.

All the above considered me to learn it and become more serious about my career. I can't wait to unfold my future and all I wanted from now on is to take control of my future.
